Industrial Emissions Analysis Range

Our dedicated team is always on the forefront of designing and manufacturing the most suitable, custom and innovative instruments to match almost every industrial application.

Standards regulating exhaust gas emissions in industrial systems are also becoming more strict, being of great relevance for both climate and health protection.

In high intensity processes, great quantities of toxic gases are produced, such as carbon monoxide (CO), carbon dioxide (CO₂), nitrogen oxides (NO_x), sulfur dioxide (SO₂) amongst others.

Often performed in extreme environments, featuring high levels of humidity, high temperatures and presence of particulate matter coming from combustion gases, accurate emissions measurements are needed in order to verify the quality, efficiency and safety of the process.

The analysis are typically performed by special laboratories, maintenance technicians of industrial plants or by the industries themselves.

In order to answer these needs, Seitron has developed a line of industrial emissions analyzers, either portable for periodical measurements or fixed for continuous emissions monitoring.

Sample Conditioning Unit (SCU)

FOR LOW NOX & LOW SOX MEASUREMENTS

When using a portable gas analyzer for monitoring NO, NO₂ and/or SO₂ ranges **below 50 ppm** or if you are doing Long-term testing (over 40+ min), we need a sampling system designed to **minimize or eliminate** the residence time of the soluble gases in contact with condensing water droplets forming in side the walls of the sampling lines. Otherwise, the measured readings **could be in excess of 20% lower** than the actual values in the process.

Refrigerant Gas Leak Detection

Cool Guardian refrigerant gas leak detector, characterized by fast response time, low-temperature performance (-40°), and integrated audio and visual alarms, simplifies and facilitates compliance to safety regulations.

Modern refrigeration systems are engineered for optimal efficiency and airtight integrity.

However, improper installation, unintentional damage, or mechanical wear and tear can potentially lead to hazardous leaks.

The Cool Guardian gas transmitter serves as a vigilant guardian against unforeseen leaks, which could compromise both the environment and human health.

Complete range of refrigerant gas sensors for different applications

Selection of the appropriate gas sensor to monitor the presence of refrigerants in **industrial processes, commercial cooling systems, or refrigeration facilities** is crucial when it comes to fixed gas transmitters. These transmitters are designed to accurately detect and measure various refrigerant gases, providing essential data for maintaining the integrity of refrigeration systems and preventing potential leaks.

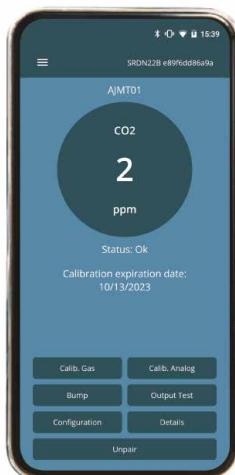

Calibration Kit for easy in-field calibration

Seitron Cool Guardian periodic calibration is very easy, thanks to our calibration kit and Seitron Guard mobile App. The optional calibration kit includes a magnetic stick and a gas adapter. These items allow to operate on the field, without removing the detector's cover. By following step-by-step instructions on the App, the user can fine-tune the device ensuring high performing operations. Periodic Bump test and Calibration of Cool Guardian Stand Alone Transmitter help to maintain the safety and efficiency of refrigeration systems.

ACIMB2
Modbus® RTU Interface

This device is a 'MASTER' control unit for the detection of gas leaks with Modbus® RTU communication protocol. Up to 32 transmitters (slaves) can be connected to the controller. Each transmitter can detect a specific gas and can communicate its status via Modbus® registers.

Multizone Gas Systems Monitoring Software

Gas Master is the PC software for managing and monitoring RYK01M control units connected via ACIMB2 gateways. The software allows you to configure and display the status of the connected control units. Each control unit is displayed as a stand-alone tab. The 32 sensors (maximum) of each control unit are grouped together to provide visualisation of detected gas levels, alarms and control unit configuration.
